KUBERSTONES

Admin Handbook

How to run the store from the admin panel —
orders, catalog, the bracelet studio, marketing and site content.

For admins, managers and staff · Edition October 2026

Open from the admin: account menu → Admin handbook

CONTENTS

What is in this handbook

1. Getting started . . . 3
2. Finding your way . . . 4
3. Your daily routine . . . 6
4. Orders . . . 7
5. Returns, refunds and exchanges . . . 8
6. Customers . . . 8
7. Catalog: products, categories and stock . . . 9
8. The bracelet studio . . . 10
9. Marketing . . . 11
10. Website content . . . 12
11. Settings, shipping and the team . . . 14
12. Good habits . . . 14
13. Troubleshooting and quick reference . . . 15

CHAPTER 1

Getting started

The admin panel is where you run Kuberstones day to day: fulfil orders, keep the catalog and stock right, set up promotions and change what customers read on the website. Nothing here needs technical knowledge.

Signing in

1. Open the store website and go to **/login** (or click the person icon in the header and choose *Sign in*).
2. Sign in with your team email and password. Staff accounts and customer accounts use the same login page.
3. You land on the **Admin** link in the header, or go straight to **/admin**.

Who can do what

Role	Can use	Cannot use
Admin	Everything, including Store settings, payment and shipping keys, and team roles.	—
Manager	All day-to-day screens: orders, returns, catalog, studio, marketing and content.	Store settings (payments, shipping keys, webhooks) and changing roles.
Staff	The same day-to-day screens as a manager.	Store settings and changing roles.

> **Tip.** If a menu item you expect is missing, your role does not include it. Ask an admin — the server would refuse the action anyway.

If you are signed out

When your session ends (for example after a password change or a long break) you see *“Your session has ended. Please sign in again.”* Sign in again — anything already saved is safe. Unsaved form changes are lost, so save before stepping away.

CHAPTER 2

Finding your way

Every screen shares the same layout: the menu on the left, the top bar, and the page itself.

The left menu

Group	What lives there
Overview	Dashboard, Analytics, Notifications
Sales	Orders, Returns & refunds, Customers, Customer groups, Abandoned carts
Catalog	Products, Categories, Collections, Attributes, Inventory
Bracelet studio	Beads & charms, Purposes & intentions, Layer catalogs, Studio pricing & rules
Marketing	Coupons, Offers, Flash sales, Banners, Featured products, Newsletter
Content	Homepage (layout), Site pages (all website copy and images), Journal, FAQs, Media library, Contact inbox
Settings	Store settings (admins), Shipping & pincodes, Team & users

The gold bar marks the page you are on. Use **Collapse** at the bottom of the menu to shrink it to icons; the choice is remembered. On a phone, tap the three-line button at the top left to open the menu (tap outside it or press Escape to close).

The top bar

- **Where you are** — on wide screens the bar shows the section and page, e.g. *Sales / Orders*. The browser tab shows the page name too, so several admin tabs are easy to tell apart.
- **Search pages & actions** — click it or press **Ctrl + K** (Cmd + K on a Mac). Type a few letters of any page (“coup”, “low stock”) and press Enter.
- **Storefront** — opens the live website in a new tab so you can check a change without losing your place.
- **Theme** (sun / moon icon) — choose Light, Dark or Match system.
- **Bell** — the latest notifications (new orders, return requests and so on). The gold number is how many are unread.
- **Your initials** — your account: view the storefront, open this handbook, or sign out.

Light and dark mode

The admin works in a light theme, a dark theme, or **Match system**, which follows your computer or phone setting and switches automatically. Pick one from the sun/moon button in the top bar, or search “theme” in Ctrl + K. The choice is saved on that browser. The website customers see is not affected.

Lists, filters and forms

- Search boxes and filters stay in the page address, so you can bookmark a filtered list or send it to a colleague.

- Click a row to open it. Small records open in a side panel; large ones (orders, products) open a full page.
- Required fields are marked with a gold *****. Problems are shown in red under the field.
- If you close a panel with unsaved changes, the admin asks before throwing them away.
- Deleting, cancelling and other money or stock actions always ask you to confirm. Some bulk actions ask you to type a word to be sure.

> **Tip.** Saving anything in the admin refreshes the live website automatically within a few seconds. If a customer tab was already open, it picks up the change when it is next focused.

CHAPTER 3

Your daily routine

Start each day on the Dashboard — it shows how the shop is doing and what needs attention.

The Dashboard

Choose a period at the top (Today, 7 days, 30 days, 90 days, 12 months or Custom). The tiles show revenue, orders and other headline numbers; the chart shows sales over the period.

Needs attention lists the work waiting for you. Click a line to jump to the matching, already-filtered list:

Line	What to do
Paid — start processing	Orders paid online. Check the items and move them to Processing.
Processing — pack them	Orders being prepared. Pack the bracelet and mark it Packed.
Packed — ready to ship	Hand over to the courier and mark Shipped (with tracking).
Awaiting payment	UPI or unpaid orders. Confirm the payment once it arrives, or cancel after a reasonable wait.
Return requests to review	Customers asking to return or exchange. Approve or reject (chapter 5).
Abandoned carts	Carts left for over an hour — useful for follow-up.

A good daily checklist

1. Open the Dashboard and clear **Needs attention** from top to bottom.
2. Check **Notifications** (the bell) and the **Contact inbox** for customer messages.
3. Look at **Inventory** → **Low stock** (Ctrl + K → “Low stock”) and reorder anything running out.
4. Glance at any running **Flash sale** or **Offer** to make sure it is still what you intend.

CHAPTER 4

Orders

Find an order, check its payment, and move it through fulfilment.

Finding an order

Sales → **Orders** lists every order with its number (KS-…), customer, total, payment and status. Use the search box (order number, name, email or phone) and the filters for status, payment and method.

Order statuses

Status	Meaning	Can move to
Awaiting payment	Placed but not paid yet (UPI pending, failed online payment).	Paid, Processing, Packed, Cancelled
Paid	Payment received.	Processing, Packed, Shipped, Cancelled
Processing	Being prepared / strung.	Packed, Shipped, Cancelled
Packed	Packed and waiting for the courier.	Processing, Shipped, Cancelled
Shipped	With the courier.	Delivered, Returned, Processing
Delivered	Received by the customer.	Returned
Cancelled	Stopped. Final.	—
Returned	Came back. Final.	—

The order page only offers the moves allowed from the current status, so you cannot skip a step by mistake.

Fulfilling an order

1. Open the order. Check the items — custom studio bracelets list every bead, the charm, thread and any name.
2. If it is a UPI or cash-on-delivery order, confirm the payment when it arrives (**Set status to Paid**).
3. **Move to processing** while you prepare it, then **Mark as packed**.
4. Print the packing slip from the order page if you need one.
5. Create the shipment / add tracking and **Mark as shipped**. The customer can follow the tracking from their account.
6. When it arrives, **Mark as delivered** (tracking updates may do this for you; **Refresh tracking** pulls the latest).

> **Careful.** Cancelling an order cannot be undone. If a shipment was already booked, use **Cancel shipment** on the order page first.

CHAPTER 5

Returns, refunds and exchanges

Customers request returns and exchanges from their account. You review them under Sales → Returns & refunds.

Status	Meaning	Next step
Requested	The customer asked; nothing has happened yet.	Approve or Reject
Approved	You accepted it; the item is on its way back.	Mark refunded, Restock items, or Reject
Refunded	Money has been returned to the customer.	Restock items (if not done)
Restocked	Items are back in stock.	Mark refunded (if not done)
Rejected	Declined. Final.	—

Handling a return

1. Open the request and read the reason and the customer's note.
2. **Approve** it (or **Reject** with a short reason the customer will understand).
3. When the item is back and checked, **Mark refunded** once the money has been sent, and **Restock items** if they can be sold again.
4. For exchanges, ship the replacement as a normal order once the original is back.

> **Tip.** Restocking adds the items back to Inventory automatically and records it in the stock history as a customer return.

CHAPTER 6

Customers

- **Customers** — every account, with total spend and order count (paid and fulfilled orders only). Open one to see their orders, addresses and notes.
- **Customer groups** — internal tags you put on profiles (e.g. "Wholesale", "VIP"). They do not change prices or coupons on their own.
- **Abandoned carts** — carts left untouched for over an hour, so you can follow up.
- **Team & users** (Settings) — also lists customers; admins can change a role or set a new password if someone is locked out (there is no email reset from the admin).

CHAPTER 7

Catalog: products, categories and stock

Everything sold ready-made in the store.

Adding or editing a product

1. **Catalog** → **Products**, then **New product** (or Ctrl + K → “New product”). Click an existing product to edit it.
2. Fill in the name, price (and the original price if it is discounted), short description and description.
3. Add images. **The first image is the cover**; use the arrows to reorder.
4. Choose the family (Crystals, Rudraksha or Gemstones) and a category, and add it to collections if you like.
5. Set stock and the low-stock warning level.
6. Fill in attributes (like origin or chakra) — they appear as pills on the product page.
7. Leave **Active** on to sell it; turn **Featured** on to show it in the homepage featured rail. Save.

Inactive products are hidden from the store but kept. From the product list you can select several products and Activate, Deactivate, Feature or Unfeature them at once.

Categories, collections and attributes

Screen	Use it for
Categories	The store menu tree. Subcategories (e.g. Zodiac bracelets under Crystals) show inside their parent’s page and in the header dropdowns. Hidden categories disappear from the menu.
Collections	Curated groups: hand-picked products, or filled by a rule (featured, new arrivals, best sellers, trending, under a price). They appear in the header Collections menu and on /collections.
Attributes	Extra properties for products and beads, as free text or a choice list.

Inventory

Catalog → **Inventory** shows stock for products and beads. Every change needs a reason — *Restock / new delivery, Stock count correction, Damaged or lost, Customer return* or *Other* — and is kept in the **History** tab, so you can always see who changed what and why.

CHAPTER 8

The bracelet studio

The studio lets customers compose their own bracelet: purpose → intention → crystals → birth details → charm & thread → review.

Screen	What you manage
Beads & charms	The crystals customers can string (name, image, colour, price, tier: Natural, Premium or Rare) and the charms that finish each bracelet. **Hide from studio** takes a bead out of the studio without deleting it.
Purposes & intentions	The first two studio choices (e.g. Love → Attract love) and which crystals each one recommends. Also the Mulank (birth number) crystals and the zodiac beads used for the personal beads.
Layer catalogs	The rows behind the zodiac, numerology, planetary and profession paths. Hidden rows are not offered.
Studio pricing & rules	How many beads fit (wrist and bead sizes), bead and crystal limits, threads, CZ accents, packaging prices, whether a charm is required, and the order of the “Begin by” paths.

Tip. A custom bracelet’s price is the beads plus the charm, thread, accents and packaging set on Studio pricing & rules. Change prices there and on Beads & charms — not on the order.

The studio’s step titles and help text are edited under **Content** → **Site pages** → **Customize page / Studio labels**.

CHAPTER 9

Marketing

Discounts, timed sales and what customers see first.

Tool	How it works	Good for
Coupons	A code the customer types at checkout. Percent or fixed amount; for the whole order, categories or products; for everyone, new or returning customers; with a minimum order, dates and usage limits.	Campaigns, influencers, “WELCOME10”.
Offers	Automatic — no code. Percent or amount off, buy X get Y, bundle discount or free shipping, on all products, a category or specific products.	Store-wide promotions.
Flash sales	Timed price drops on chosen products with a countdown on the website (home page block and /sale).	Short, urgent sales.
Banners	Images with a link on the Home, Shop, category or collection pages, with optional start and end dates.	Announcing a launch or sale.
Featured products	The homepage featured rail, in your order (drag or use the arrows, then save).	Choosing what to show first.
Newsletter	Everyone who subscribed. Export the list to send campaigns from your email tool.	Email marketing.

Creating a coupon

1. **Marketing** → **Coupons** → **New coupon** (or Ctrl + K → “New coupon”).
2. Type a code or click **Generate**. Codes are stored in capitals; customers can type them in any case.
3. Choose the type and value, the minimum order (0 = none), who it is for, the dates and the usage limits. Save.
4. Use **Usage history** on a coupon to see who used it; **Duplicate** to make a similar one quickly.

> **Tip.** Flash sales only run while they are switched on *and* inside their start–end window. Check both if a sale is not showing.

CHAPTER 10

Website content

Every word and image customers read on the storefront can be changed here, without a developer.

Homepage layout

Content → **Homepage** lists the home page sections in order. For each one you can switch it on or off, move it up or down, and give it start and end dates (for example a seasonal banner). **Edit copy** jumps straight to that section's text in Site pages.

Section	What it is
Hero	The large opening image and headline, with optional extra slides and a product "specimen" line.
Facts strip	Short live numbers under the hero (stones, purposes, rating…).
Houses & studio	The three house plates (Crystals, Rudraksha, Gemstones) and the studio card.
Collection carousel	Featured, best sellers, new arrivals and trending tabs.
Flash sale	Countdown and products — only while a sale runs.
Kundali offer	The free Kundali banner. **It advertises an offer — switch it off when the offer is not running.**
Shop the look	Styled photos with numbered product tags.
Stone finder	Suggests stones from a purpose or a birth date.
Shop by purpose	Purpose cards that open the studio.
The craft	Image with four attribute tiles and a button.
Reviews	Average rating, customer quotes and a short FAQ.
Promises strip	Four promise tiles (from the Trust claims).
Journal, Newsletter, Closing banner	Latest posts, sign-up block and the last banner.

Site pages

Content → **Site pages** is the editor for all website copy and images, grouped as *Homepage*, *Site-wide* (header, footer, contact drawer) and *Pages* (shop, house and category pages, product page, bag, checkout, sign in, account, policies, studio). Pick a section on the left, change the fields, and press **Save**. Each section saves on its own and goes live straight away.

- **Headlines** — where a hint says so, the last word (or the last sentence) is shown in gold italics.
- **Images** — click an image field to upload or pick from the Media library. Leave it empty to use the built-in photo.
- **Links** — use paths on the site, like */shop*, */customize* or */collection/best-sellers*.

- **Header (Site-wide → Header brand)** — menu labels, the thin notice line above the header (separate several messages with "·") and the account menu wording.
- **Footer** — the four trust badges, brand text, payment badges, link columns, company and grievance details.
- **Tokens** — some fields fill in live values, e.g. *{count}*, *{threshold}* or *{stones}*. Keep the curly brackets exactly as shown.

> **Careful.** Claims on the website (free shipping, guarantees, offers like the free Kundali) are promises to customers. Only publish what the business actually provides, and update the text when an offer ends.

Journal, FAQs, media and messages

Screen	Use it for
Journal	Write posts for /journal. Write and Preview tabs; save as a draft or publish.
FAQs	Questions on the home page and the FAQ page, in this order. Hidden questions are kept but not shown.
Media library	Every uploaded file. Images up to 15 MB (JPEG, PNG, WebP, GIF, AVIF), videos up to 40 MB (MP4, WebM, MOV). Upload here once and reuse anywhere.
Contact inbox	Messages from the website contact form. Reply by email, then mark them read.

CHAPTER 11

Settings, shipping and the team

Screen	Who	What
Store settings	Admins	General store details, Payment (UPI for manual confirmation, Cashfree for online card / UPI / netbanking), Shipping credentials, Notifications and Webhooks.
Shipping & pincodes	All staff	Local pincode overrides: extra fees, delivery estimates, carriers, and blocking checkout for an area. Includes a checker that shows exactly what checkout will offer for an address.
Team & users	All staff (roles: admins)	Who can sign in to the admin and what they can do. Add a team member with an email and password; they use the normal login page.

Careful. Payment keys and shipping credentials are secrets. Never paste them into chat, email or Site pages — only into Store settings.

CHAPTER 12

Good habits

- Save often; the admin warns you before closing unsaved work, but a lost connection can still lose it.
- After a content change, click **Storefront** in the top bar and check the page on a phone-sized window too.
- Use start and end dates on banners, sales and homepage sections instead of remembering to switch them off.
- Prefer **Hide** / **Inactive** over **Delete** — hidden things can come back; deleted things cannot.
- Use clear reasons on stock changes and returns; the history is your audit trail.
- Give each person their own account with the lowest role they need. Remove accounts when people leave.

CHAPTER 13

Troubleshooting and quick reference

Problem	Try this
“Your session has ended.”	Sign in again. Saved work is safe.
A change does not show on the website	Make sure you pressed Save. Refresh the storefront tab. Check the section is switched on and inside its dates on Homepage layout.
An image does not show	Re-open the field and pick the image again from the Media library. Very large files are refused — compress to under 15 MB.
A menu item or button is missing	Your role does not include it. Ask an admin.
A flash sale is not visible	It must be switched on and the current time inside its start–end window, with at least one active product.
A coupon is refused at checkout	Check its dates, minimum order, usage limits, and who it is for (new / returning customers).
“Something went wrong” on a page	Press Try again. If it keeps happening, note the page and time and tell your developer.

Keyboard shortcuts

Keys	Does
Ctrl + K (Cmd + K)	Search pages and quick actions; also switch theme.
↑ / ↓ then Enter	Move through search results and open one.
Escape	Close the search, a menu, a side panel or the phone menu.

Where do I change…?

I want to change…	Go to
The homepage headline or image	Site pages → Hero
Which homepage sections show	Homepage (layout)
The notice line above the header	Site pages → Header brand → Notice strip
Footer trust badges or links	Site pages → Footer
The Kundali offer text or amount	Site pages → Kundali offer
A product price or photo	Products → the product
A bead price	Beads & charms
Custom bracelet extras (thread, packaging)	Studio pricing & rules
Shipping fee for an area	Shipping & pincodes

I want to change…	Go to
Who can use the admin	Team & users
